

SETMA Provider Meeting
October 18, 2016

SETMA's Merit-Based Incentive (MIPS) Quality Metric Tool Tutorial

Overview

- The Medicare Access and CHIP Reauthorization Act of 2015 (MACRA) which authorized and required the Merit-Based Incentive Payment System (MIPS) resulted in CMS producing the Annual **Quality and Resource Use Report (QRUR)** for each Taxpayer Identification Number receiving Medicare Fee-for-Service funds.
- As of this date, in addition to CMS' REI report done on SETMA in 2011 (see: <http://www.setma.com/in-the-news/CMS-Medical-Home-Feedback-Report-Qualify-Cost>), SETMA has received two QRURs:
 - the report for the first half of 2015 is found at <http://www.setma.com/Letters/pdfs/cms-quality-resource-and-utilization-report-qgur-data-for-2015-for-setma.pdf>.
 - the report for the full year 2015 is found at: <http://www.setma.com/Letters/pdfs/cms-quality-resource-and-utilization-report-qgur-data-for-2015-for-setma-final.pdf>

Overview

- SETMA has completed an analysis of these reports and has designed tools for improving our cost and quality. Some of that analysis can be reviewed at: SETMA's <http://www.setma.com/Letters/setmas-prescient-preparation-for-macra-and-mips-september-2016>. This shows that SETMA has prepared well for this time with:

NCQA recognition as a Tier 3 Patient-Centered Medical Home from 2010-2019 which meets the MIPS Clinical Practice Improvement Activities requirement of MIPS.

A twenty-one-year use of a certified EMR meeting Meaningful Use standards and now the MIPS Advancing Care Information Systems (<http://www.setma.com/Letters/macra-mips-where-does-setma-stand>).

Overview

- SETMA has completed an analysis of these QRUR reports and has designed tools for improving our cost and quality. Some of that analysis can be reviewed at: <http://www.setma.com/Letters/requirements-of-the-medicare-access-and-chip-reauthorization-act> and <http://www.setma.com/Letters/setmas-prescient-preparation-for-macra-and-mips-september-2016>.
- These reviews show that SETMA has prepared well for this time with:

Pursuing quality standards by the development of a Model of Care which includes tracking, auditing, analyzing statistically, public reporting by provider name of quality performance and the designing of quality improvement with this data. (see <http://www.setma.com/the-setma-way/setma-model-of-care-pc-mh-healthcare-innovation-the-future-of-healthcare>)

From this came SETMA's participation in PQRI (2007) and PQRS (2011) and now MIPS.

Being attentive to the cost of the care we deliver to all patients but particularly to Medicare Advantage beneficiaries and Medicare Fee-for-Service patients and Medicaid patients.

Overview

- As we use the Final 2015 data from the QRUR to design solutions to improved quality, SETMA has deployed the following MACRA/MIPS Quality Measure template. These templates identify:
 1. the metrics,
 2. gives their descriptions,
 3. identifies to whom they apply and
 4. shows you how to easily and efficiently meet each of them.
- If we all follow this easy tool, our MIPS quality performance will improve dramatically.

MIPS Tutorial

- Because MIPS will be so important to our practice going forward, the tool for the MIPS quality measures will appear in three places in the EMR, allowing you the convenience at performing these functions in your own workflow:
 1. AAA Home
 2. Master GP
 3. The Plan Template
- The link will appear red if you have not been to it on the current encounter, or if you went to it, and left something undone which the tool indicates needs to be done. The following are templates which show you where the MIPS Quality Measures appear on each of these templates:

Fall Risk

- All of SETMA's providers and nurses are familiar with SETMA's Fall Risk Questionnaire. It is an important issue with the elderly or disabled. Be sure that as you measure the patient's risk that if they are at increased risk you address issue of safety with the patient or the patient's family.
- Clicking the button opens the template to complete a fall risk assessment. Use the Return button to go back when finished.

BMI Screening & Follow-Up

- BMI is an important measurement in a patient's care. Because we do it so automatically, we need to remind ourselves of how high BMIs - above 30 - increase patient risk for dementia, cancer, metabolic syndrome, diabetes and a host of other disorders. In addition to measuring the BMI, we must be taking steps along with SETMA LESS Initiative tool to encourage patients to moderate their eating, to increase their exercise and to lose weight.
- Opens the LESS Initiative template to complete BMI assessment and follow-up. Use the Return button to go back when finished.

BMI Screening & Follow-Up

Last Updated 08/20/2016

SETMA's LESS Initiative

10-15 pounds of excess weight places a person at a higher risk for developing diabetes, but 10-15% decrease in weight, even if a person is obese, decreases that risk significantly. The bad news is that more people are at greater risk of developing diabetes than think they are, but the good news is that a person can help decrease their risk without attaining their ideal body weight.

You are 0 pounds overweight which places you at a higher risk for developing Diabetes.

If you lose 0 to 0 pounds, you will significantly reduce your risk of developing Diabetes.

[Calculate Conclusion...](#)

Based on your age, body composition indicators (BMI or body fat), and the risk factors listed above you have a risk of developing diabetes. You must lose weight, exercise, stop smoking and/or avoid inhaling other people's smoke, and you need to maintain your weight loss through continuing to exercise. We will continue to monitor your blood pressure, blood sugar and lipids on a regular basis.

☒ We will provide you with follow-up counseling to help you stay on track towards health lifestyles.

☒ We will monitor you annually for the development of diabetes.

Blood Pressure Control

- The single most important metric in healthcare is for patients to control their blood pressure; even for patients with diabetes, controlling the blood pressure is more important even than controlling the blood sugar.
- Opens the hypertension suite of templates to address elevated blood pressure. Use the Return button to go back when finished

High-Risk Medications

- Whether in the Medicare Advantage Stars Program, MIPS, HEDIS or other quality metric standards the decreasing use of potentially high risk medications in those over 65 is important. Please remember, going forward with MIPS, even if the patient begins the year on one or more of these medications, if you do not renew that medication in the reporting year, you meet this metric standard.
- Opens a pop-up which will list any active medications for the current patient which are deemed high risk. You must enter a response next to each medication. If you click the "Click to Stop" button, it will automatically stop that medication in the patient's chart. Click OK when done.

At the bottom of the window, there is a toolbar with buttons for Prescribe New, Print, Send, Renew, Interactions, Stop, Resources, Dose Range, Delete, Rx Eligibility, and Medication History. Below the toolbar, the text 'ProAir HFA 90 mcg/actuation aerosol inhaler' is displayed.

HbA_{1c} Control

- The MIPS measure requires that a patient with diabetes have at least one HgbA_{1c} annually. If the value is 7.0% or less, that is all that is needed. If the value is above 7.0%, you need to see the patient again after a change in medication or treatment recommendations and repeat the A_{1c}.
- The button opens the Diabetes suite of templates to address elevated HbA_{1c} control. Use the Return button to go back when finished.

Measure 068 - Medication Reconciliation
 Patients 18 and older at every encounter.

Measure 139 - Fall Risk Screening
 Patients 65 and older at least once during the year.

Measure 069 - BMI Screening and Follow-Up
 Patients 18 and older at least every six months.

Measure 165 - Controlling High Blood Pressure
 Patients 18 and older with hypertension should have blood pressure controlled to below 140/90 mmHg.

Measure 126 - Use of High Risk Medications in the Elderly
 Medications deemed high risk should be avoided in patients over 65 years of age.

Measure 127 - Pneumonia Vaccination
Ordered Patients 65 and older should have had the pneumonia vaccine at least once.

Measure 128 - Antidepressant Medication Management
 Patients diagnosed with depression should have an active prescription for an antidepressant for a continuous 180 days.

Measure 122 - HbA1c Control for Patients with Diabetes
Ordered Patients with diabetes should have a HbA1c test at least once during the year and should be controlled to less than 7.0%.

Measure 134 - Urine Protein Assessment for Patients with Diabetes
Ordered Patients should have a nephropathy screening at least annually and/or have an active prescription for an ACE or ARB.
 **Patients with Stage 4 or higher CKD are excluded.

Measure 061 - Heart Disease and Cholesterol Screening
Ordered Patients 20-79 years of age should have their heart disease risk assessed and a fasting lipid panel at least annually if high risk or every four years if low risk.

Measure 164 - IVD Use of Aspirin or Another Antithrombotic
 Patients with ischemic vascular disease should have an active prescription for aspirin or another antithrombotic.
